

EYESCREEN PHOTOGRAPHIC EXAMINATION

Envision Eyecare is pleased to provide our patients with an advanced digital retinal exam called EyeScreen. EyeScreen is a high resolution screening photograph of your retina which will help us document, review and compare your retina over time. We will use the EyeScreen exam to document a baseline image for our charts, screen for eye diseases, and improve our ability to view your internal health at a much higher resolution than other instruments.

We are concerned about retinal problems such as macular degeneration, glaucoma, retinal holes, detachments, and diabetic retinopathy (all of which can lead to partial loss of vision or blindness). Additionally many signs of systemic diseases such as diabetes and the effects of high blood pressure can be detected with the EyeScreen Photographic Examination.

EARLY DETECTION OF EYE DISEASE IS CRUCIAL!

You can expect from this exam:

- An in depth view of the retinal surface (where eye disease first manifests)
- The ability to review the images with you (Dr. Fox will show you your retina.)
- A permanent record for your medical file, for serial analysis, comparisons, and diagnosis
- To be fast, easy, and comfortable
- No dilation drops for the test (occasionally drops may be required)

Medicare and other forms of medical insurance are designed to pay for photographs if existing eye disease is present. Otherwise you will be billed \$20.00 for the cost of the photo.

Dr. Fox recommends this procedure for all her patients 20 and over, and we will perform the Retinal Photographic Exam in addition to the general eye exam you are receiving today.

I AGREE to have my retinal health evaluated with the Retinal Photographic Exam.

I DO NOT wish to have the Retinal Photographic Exam. I understand that I will still have a thorough eye examination with slit lamp observation.
